

GBT Observing for August 2003

Legend

The time is local eastern time. The dates are eastern time zone dates and the number on the far right is the local sidereal date at the start of the day. The dark vertically slanted line marks midnight local sidereal time and the light vertically slanted lines mark 6,12, and 18 hours local sidereal time.

The ~ mark indicates that the telescope has not yet been scheduled. The Se or Setup code refers to system preparation for start of Astronomical observing.

GBT proposal codes on the graphics schedule have been shortened to their minimum unique length. For example a code of 1A7 is GBT01A-007 while 2B45 would be GBT02B-045. The first number in the shortened code is the year after 2000, the letter represents the trimester (A, B or C) and the last number is a number between 1 and 999. Proposal codes followed by * and one of 3,5,6,8,A indicates if a prime focus receiver is to be used and the particular one to be used.

08/22/2003

The eastern time at midnight local sidereal time on the first of the month is 04h43m.

Codes

Notes

Na - Notscheduled
Tg - PTCS tests - Balser
Th - Software Tests - Radziwill
Tc - PTCS tests - Prestage/Balser
Ta - SDS Targets
Td - M&C Reg Tests - Minter
Tb - Spigot Card tests - Kaplan
