

GBT Observing for June 2005

Legend

The time is local eastern time. The dates are eastern time zone dates and the number on the far right is the local sidereal date at the start of the day. The dark vertically slanted line marks midnight local sidereal time and the light vertically slanted lines mark 6,12, and 18 hours local sidereal time.

The ~ mark indicates that the telescope has not yet been scheduled. The Se or Setup code refers to system preparation for start of Astronomical observing. PCO refers to Program CheckOuts which are feasibility tests of approved proposals. RCO refers to receiver checkouts.

GBT proposal codes on the graphics schedule have been shortened to their minimum unique length. For example a code of 1A7 is GBT01A-007 while 2B45 would be GBT02B-045. The first number in the shortened code is the year after 2000, the letter represents the trimester (A, B or C) and the last number is a number between 1 and 999. Proposal codes followed by * and one of 3,5,6,8,A indicates if a prime focus receiver is to be used and the particular one to be used.

06/09/2005

The eastern time at midnight local sidereal time on the first of the month is 08h42m.

Codes

Notes

An - 5B11 Minter
Ad - 4B29 Stairs et al
Ah - 5A48*8 Camilo et al
Al - 4C31 Kondratko et al
Ao - 2A69 Fisher et al
Ae - 4C43*3 Ransom et al
Af - 5B32 Thorsett et al
No - Notscheduled
Tb - RCO S band - Maddalena
Tf - Tests - Maddalena
Tg - Tests - Marganian
Th - Tests - Langston
Ta - RCO 350 MHz
Td - RCO 800Mhz
